

Aeration systems for lakes, ponds, tanks and containers. Feel free to consult us, we enjoy advising you about the right aeration system for your need.
For success in fish breeding, oxygen-rich water is crucial. If the oxygen content is too low, the fish get sick and might even die of asphyxiation.

For keeping carp there is a need of approximately 5 mg O₂/l of water, trout need about 6 mg O₂/l while it is important to ensure a content of 7-8 mg O₂/l for the intensive farming with high-grade dry feed. Only then a good and profitable result is possible.

Even in extensive ponds the oxygen level can drop below healthy values under these conditions:
A) Summer:
due to droughts the freshwater supply replenishing oxygen is not always ensured
due to the high temperatures the oxygen levels drop, the water does not bond oxygen well

B) Winter:
The milky ice layer or a layer of snow prevent sufficient light from reaching the water plants which then additionally reduce the oxygen levels. Through aeration the pond is kept ice free and there is no need to regularly break open the ice.

AERATION SYSTEMS

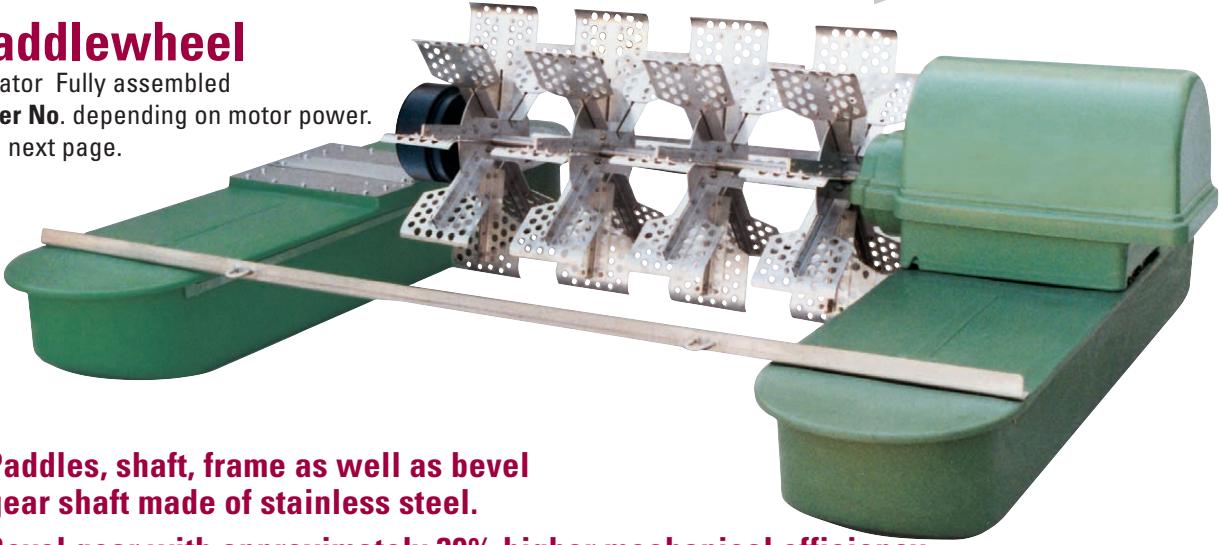

A very effective aeration system with great additional advantages.
On top of the oxygen enrichment and gas exchange a current is created in the water. This improves visually and measurably the water quality and considerably reduces algae growth.

The **top quality**, highly effective alternative **made in Germany**. The AGK paddlewheel aerator developed by AGK and tested under the most demanding of conditions. The latest development deliberately voids the weak points inherent in other well-known products. The equipment was designed in order to keep the **lifetime costs**, i.e. the sum of purchase and operating costs (energy and maintenance spending) to a minimum. This is achieved with the AGK paddlewheel aerator's **long service life** and the **high degree of effectiveness**.

Paddlewheel

Aerator Fully assembled

Order No. depending on motor power.
See next page.

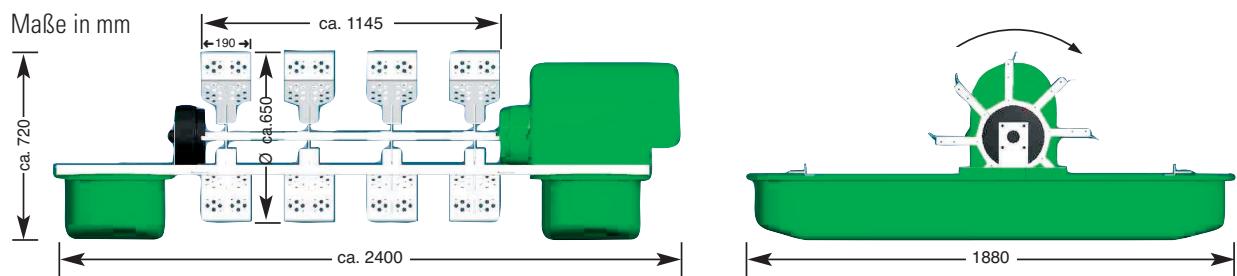

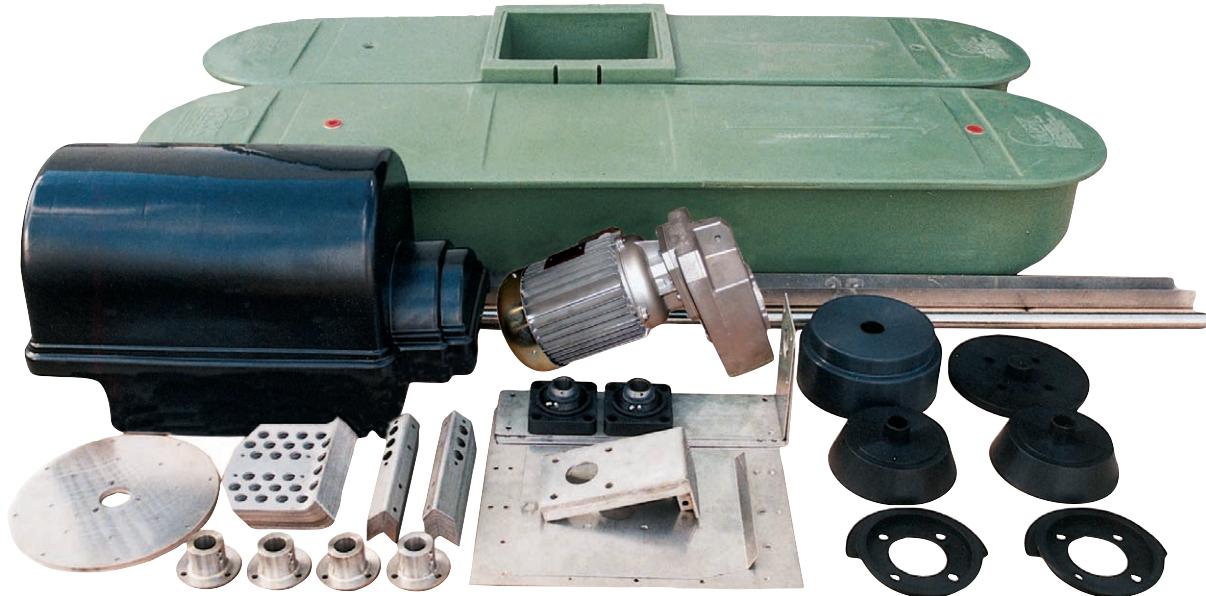

- **Paddles, shaft, frame as well as bevel gear shaft made of stainless steel.**
- **Bevel gear with approximately 30% higher mechanical efficiency than conventional worm drives.**
- **No couplings, clutch or Harde disks between paddlewheel shaft and drive leading to wear.**
- **Drive lubricated with water-friendly oil.**
- **Paddlewheel shaft mounted in four ball bearings with four waterproof seals.**
- **Float made of ozone- and UV-resistant material.**
- **Motor specially sealed against moisture.**

Paddlewheel aerator either fully assembled or as complete kit

Construction kit: kit for self assembly, reducing price and saving on shipping costs.

Order No. depending on motorization, see below

Technical Specifications:

Paddlewheel speed: 124 rpm

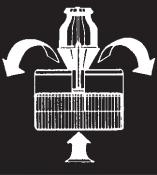

Motor power consumption: approx. 1.0 KW (= 1.37 hp) for 3 phase AC, motor nominal output: 1.5 KW, also available as single phase AC, all tensions and frequencies available.

Weight: 117 Kg

Dimensions: L x W x H: 2.40 x 1.88 x 0.72 m

Delivery: paddlewheel aerator either fully assembled or in kit form for self assembly, reducing price and saving on shipping costs. Cable, plug and motor safety switch (not included) are supplied with the delivery when ordered.

Name	Motor-frequency	Tension	3 phase / single phase	
Paddlewheel aerator, kit	50 Hz	380 – 420 V	3 phase AC	Order No. 14778/400/50/B
Paddlewheel aerator, fully assembled	50 Hz	380 – 420 V	3 phase AC	Order No. 14778/400/50
Paddlewheel aerator, kit	50 Hz	220 – 240 V	Single phase AC	Order No. 14778/230/50/B
Paddlewheel aerator, fully assembled	50 Hz	220 – 240 V	Single phase AC	Order No. 14778/230/50

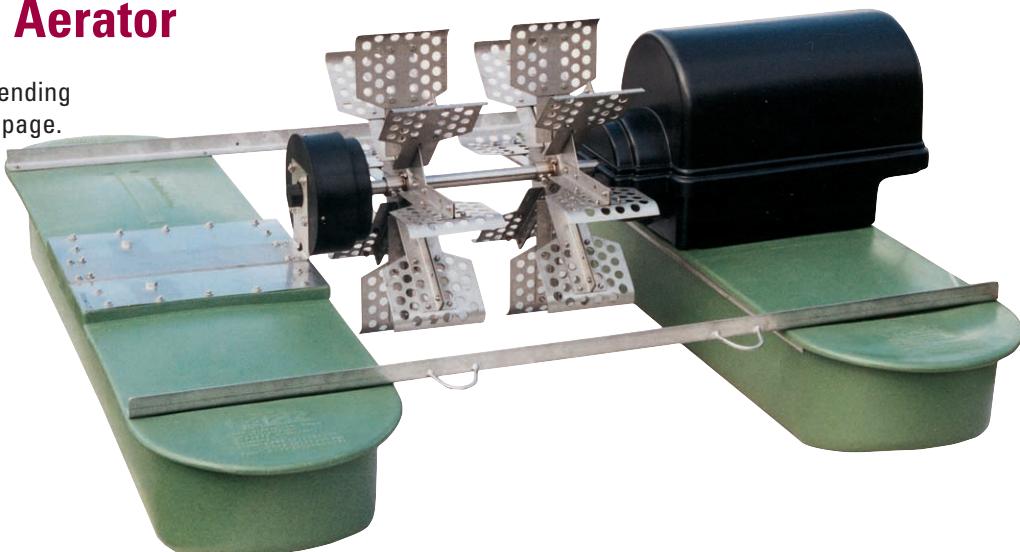

Paddlewheel Aerator

The **top quality**, highly effective alternative **made in Germany**. The AGK paddlewheel aerator developed by AGK and tested under the most demanding of conditions. The latest development deliberately avoids the weak points inherent in other well-known products. The equipment was designed in order to keep **the lifetime costs**, i.e. the sum of purchase and operating costs (energy and maintenance spending) to a minimum. Paddlewheel aerator either fully assembled or as complete kit

Construction kit: kit for self assembly, reducing price and saving on shipping costs.

Order No. depending on motorization, see below

Technical Specifications:

Paddlewheel speed: 124 rpm

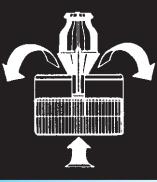

Motor power consumption: approx. 0.5 KW for 3 phase AC, also available as single phase AC, all tensions and frequencies available.

Weight: 117 Kg

Dimensions: L x W x H: 1.78 x 1.88 x 0.72 m

Delivery: paddlewheel aerator either fully assembled or in kit form for self assembly, reducing price and saving on shipping costs. Cable, plug and motor safety switch (not included) are supplied with the delivery when ordered.

Name	Motor-frequency	Tension	3 phase / single phase	
Paddlewheel aerator, kit	50 Hz	380 – 420 V	3 phase AC	Order No. 3 000 000 795-B
Paddlewheel aerator, fully assembled	50 Hz	380 – 420 V	3 phase AC	Order No. 3 000 000 795
Paddlewheel aerator, kit	50 Hz	220 – 240 V	Single phase AC	Order No. 3 000 000 837-B
Paddlewheel aerator, fully assembled	50 Hz	220 – 240 V	Single phase AC	Order No. 3 000 000 837

Paddlewheel Aerator O2 – Injection System

0.37 KW Order No. 3 000 000 840

0.75 KW Order No. 3 000 000 839

The top quality highly effective alternative made in Germany. The AGK paddlewheel oxygen aerator has been developed by AGK based on the two-wheeled paddlewheel aerator and has been tested under the most demanding of conditions. The latest development deliberately avoids the weak points inherent in other well-known products. For example there is no oxygen loss through the shaft bearings. The special shape of the oxygen cover prevents leakage of oxygen. Even bubbles of oxygen are prevented from forming and ascending to the surface. Therefore loss is kept to a minimum. The equipment was designed in order to keep the lifetime costs, i.e. the sum of purchase and operating costs (energy and maintenance spending) to a minimum. This is achieved with the AGK paddlewheel O2 injection systems's long service life and the high degree of effectiveness.

Technical Specifications:

Dimensions L x W x H:

2.5 x 1.78 x 1 m

Motor power consumption:

0.37 KW or 0.75 KW, 3 phase AC

Weight:

approx. 110 Kg

- Sealed shaft bearings prevent oxygen leakage
- Nearly bubble free water outlet through recycling of the non-dissolved oxygen under the oxygen cover
- Additional current in the water as side effect of the paddlewheels
- Paddles, shaft, frame as well as bevel gear shaft made of stainless steel.
- Bevel gear with approximately 30% higher mechanical efficiency than conventional worm drives.
- No couplings, clutch or Harde disks between paddlewheel shaft and drive leading to wear.
- Drive lubricated with water-friendly oil.
- Paddlewheel shaft mounted in four ball bearings with four waterproof seals.
- Float made of ozone- and UV-resistant material.
- Motor specially sealed against moisture.

Paddlewheel Aerator

0.25 KW Order No. 3 000 000 844

0.37 KW Order No. 3 000 000 843

0.55 KW Order No. 3 000 000 842

0.75 KW Order No. 3 000 000 841

Top Quality at a Great
Price

The top quality, highly effective alternative with a worm drive made in Germany. The AGK paddlewheel aerator has been developed by AGK and has been tested under the most demanding of conditions. This product also avoids the weak points inherent in other well-known products. This new generation of paddlewheel aerators does not need any additional bearings of the paddlewheel shaft, it is solely suspended by the drive. Thus the number of wear-prone component is reduced while friction is reduced and the mechanical efficiency is improved. The equipment was designed in order to keep the lifetime costs, i.e. the sum of purchase and operating costs (energy and maintenance spending) to a minimum. This is achieved with the AGK paddlewheel's long service life and the high degree of effectiveness even with a worm drive.

Technical Specifications:

RPM of the paddlewheel:

approx. 120 with 0.75 KW motor

RPM of the paddlewheel:

approx. 100 with 0.25 – 0.55 KW motor

Motor power consumption:

0.25 – 0.75 KW depending on version

Weight:

30 – 60 Kg

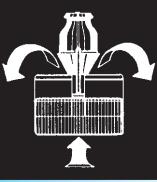

Dimensions L x W x H:

1.5 x 1.4 x 0.6 m

- **Paddles, shaft, frame as well as bevel gear shaft made of stainless steel.**
- **High efficiency worm drive**
- **No couplings, clutch or Harde disks between paddlewheel shaft and drive leading to wear.**
- **Paddlewheel shaft suspended by the drive, thus no need for additional wear-prone bearings**
- **Drive lubricated with water-friendly oil.**
- **Paddlewheel shaft mounted in four ball bearings with four waterproof seals.**
- **Float made thick-walled PE.**
- **Motor specially sealed against moisture.**

AERATION SYSTEMS

A time-proven system of aeration.

The propeller, powered by an electric motor, sucks up water to eject it high above the water surface. Not only a high degree of oxygen enrichment can be achieved, additionally vertical circulation of the water will be improved, as water from the bottom is pumped to the surface. With suction shafts adapted to the water depth, water can even be transported from greater depths to the surface.

Available with or without inlet basket

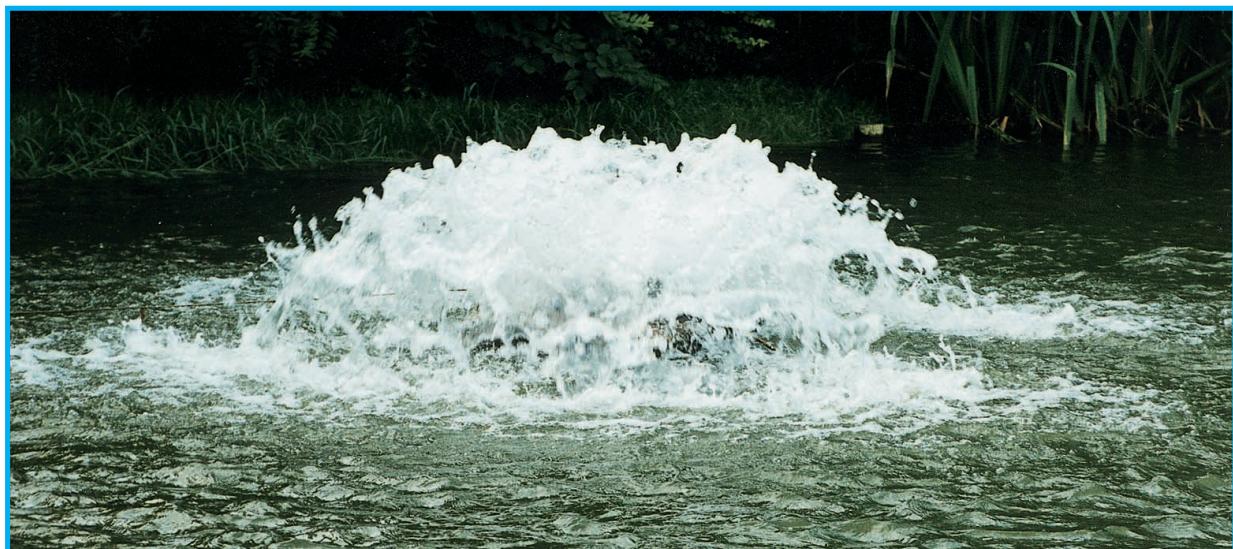

Aerator – **0.15 KW, 0.37 KW, 0.75 KW**

Also available without inlet basket

Length: 70 cm

Width: 70 cm

Height: 80 cm

Water Fountain

Order No. 3 000 000 846

The mushroom-shaped water fountain is a highly effective aeration means for small ponds, tanks and garden-biotopes. The mushroom shape can easily be adjusted by simply varying the nozzle. The height and the diameter of the ejected water can be set by adjusting the depth of the distributor cone in the nozzle.

Technical Data:

Pump:	75 W
Capacity:	3500 l/h
Max. mushroom Ø:	1.7 m
Submersed depth:	0.6 m

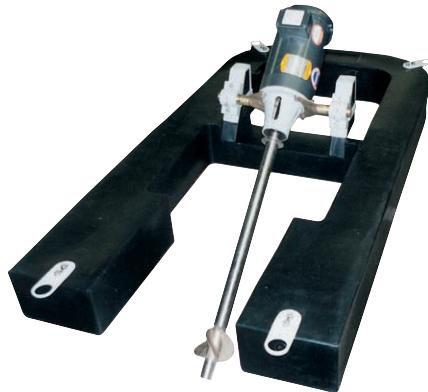

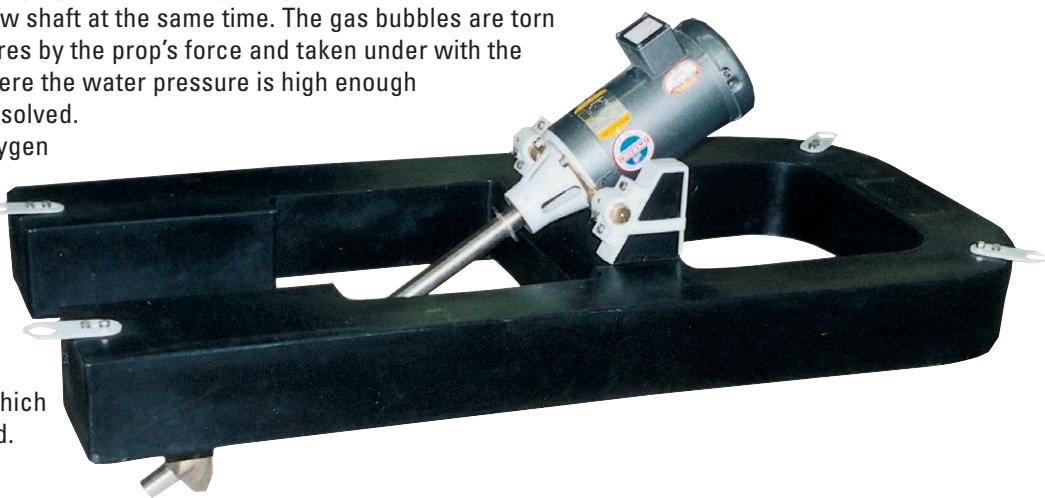

Turbo-Injector

Order No. 3 000 000 845

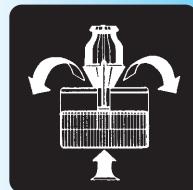

The propeller injector propels water diagonally downwards while it suck air through the hollow shaft at the same time. The gas bubbles are torn into very small spheres by the prop's force and taken under with the water into depth where the water pressure is high enough for the air be fully resolved.

In addition to the oxygen enrichment of the water a current is created in the lake. A very high efficiency of the oxygen input is achieved by the great depth to which the air is transported.

Technical Data:

Dimensions L x W x H:	1510 x 760 x 350 mm
Length of the propeller shaft:	720 mm
Motor:	1.5 KW, 1400 rpm

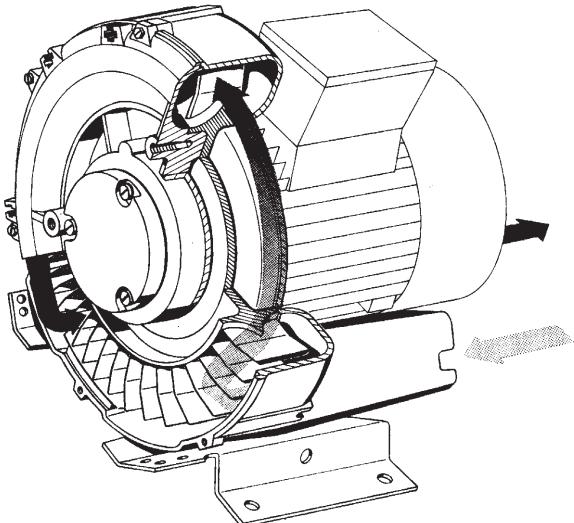

A valuable system with many advantages:

In comparison with aerators which operate on the water surface under atmospheric pressure the ring compressors blow air into the water under higher pressure. The pressure exerted on the air bubbles increases 0.1 bar per meter of depth. The higher pressure allows a greater efficiency as more gas is resolved under higher pressure. Thus, there is still sufficient oxygen input when aeration systems on the water surface have to give up, for example under hot weather conditions.

Ring Compressors for Pond Aeration and Fish Keeping

Special advantages:

- gas exchange between water and air takes place under higher pressure
- 100% oil free air
- maintenance-free
- slim build
- highly reliable
- low purchase cost
- low operational cost

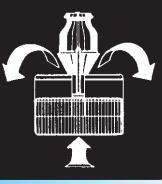

Ring Compressor – Floating

Ring Compressor – Stationary

Changes of the technical specifications and design of the pictured units reserved.

The time-proven aeration system, compressor aeration, can finally be used without installation expense. Compressor and diffuser form a floating unit.

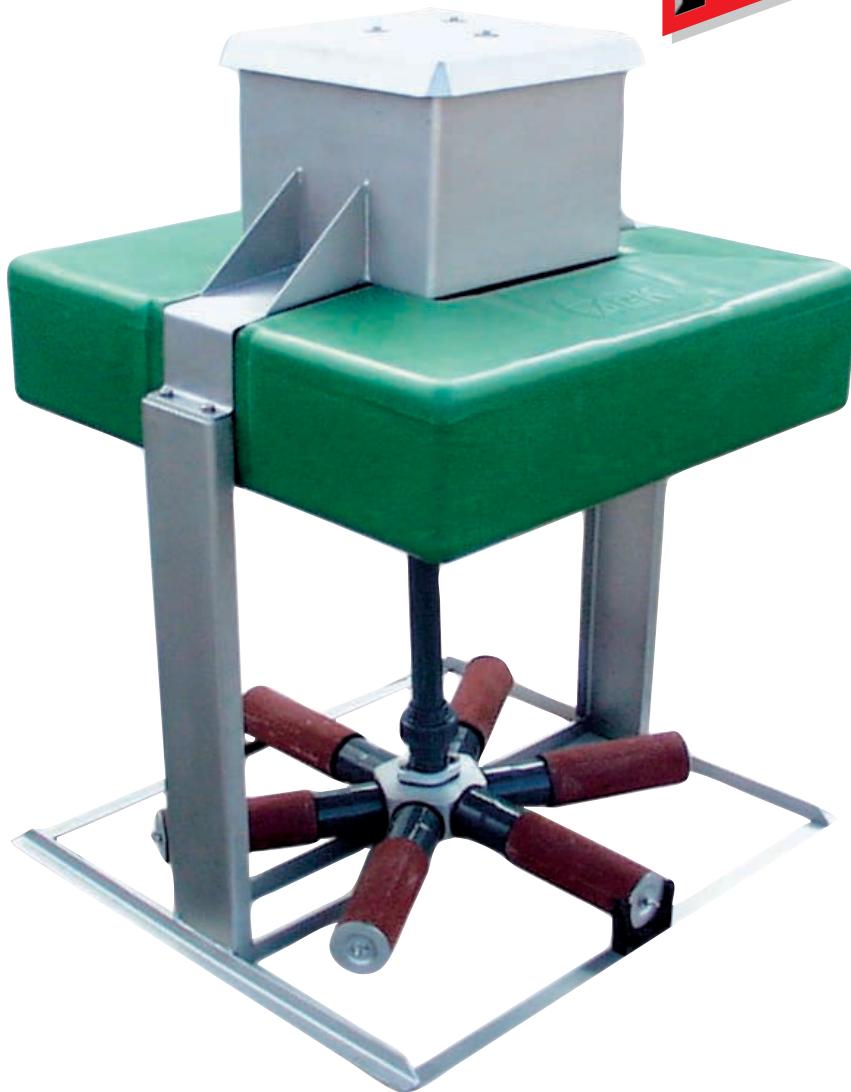

Special advantages:

- Ready to use
- No mounting and installation expenses as compared with stationary systems
- The air input takes place under higher pressure than with surface aerators just as with stationary compressors. The pressure increases 0.1 bar for each meter of immersion depth of the distributor.

Compressor Aerator – Floating

Order No. 3 000 000 518

New!

Technical Specifications:

Aeration depth:	600 mm
Number of distributors:	6
Nominal motor power:	0.37 KW
Air capacity:	40,000 l/h

Ring Compressor BH for Pond Aeration and Fish Keeping

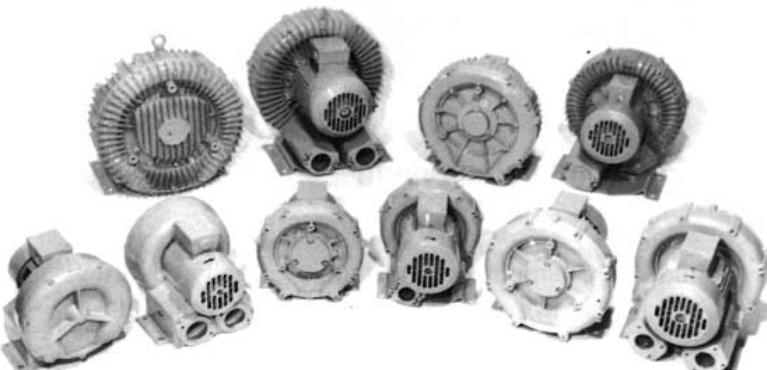

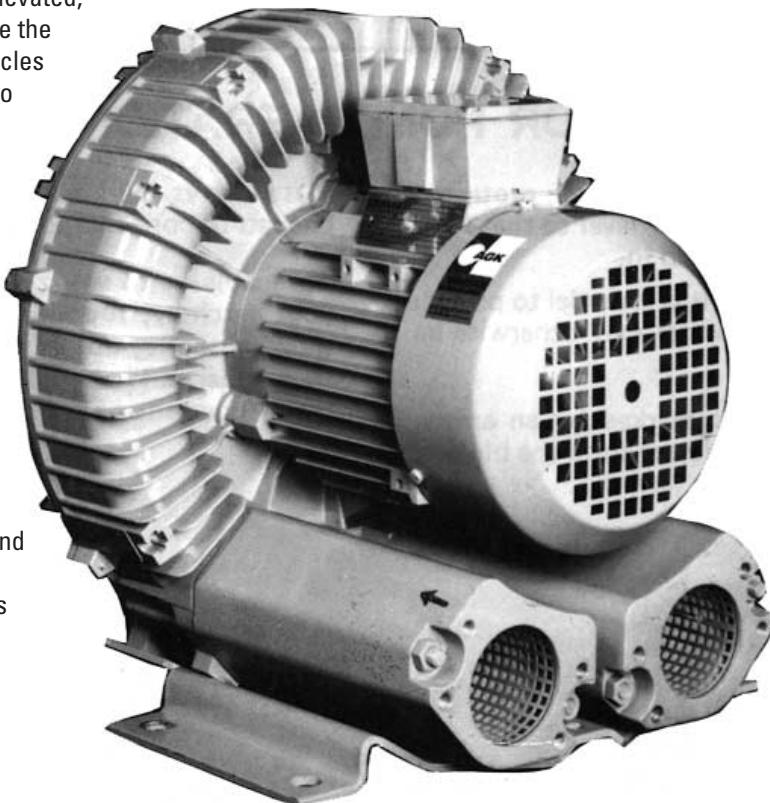

The compressors should be installed in an elevated, covered and protected place up to 1 m above the maximum water level. Solid bodies and particles may not be aspirated. Hence it is advisable to connect a filter to the inlet.

It is essential to provide correct electrical connections as water may otherwise be sucked through the blower.

The right direction of rotation is indicated by an arrow on the body.

The entire network of air pipes and hoses must drop away from the compressor towards the distributors to prevent water pockets from condensation water.

Let us work out a precisely detailed offer for your hatchery or fish farm. Just send us a dimensioned sketch showing the lay-out and size (length, width and depth) of the ponds and tanks in relation to each other as well as the planned site of the ring compressor(s).

Ring Compressors SD for External Drive

There are several possibilities to power an aeration unit without mains connection:

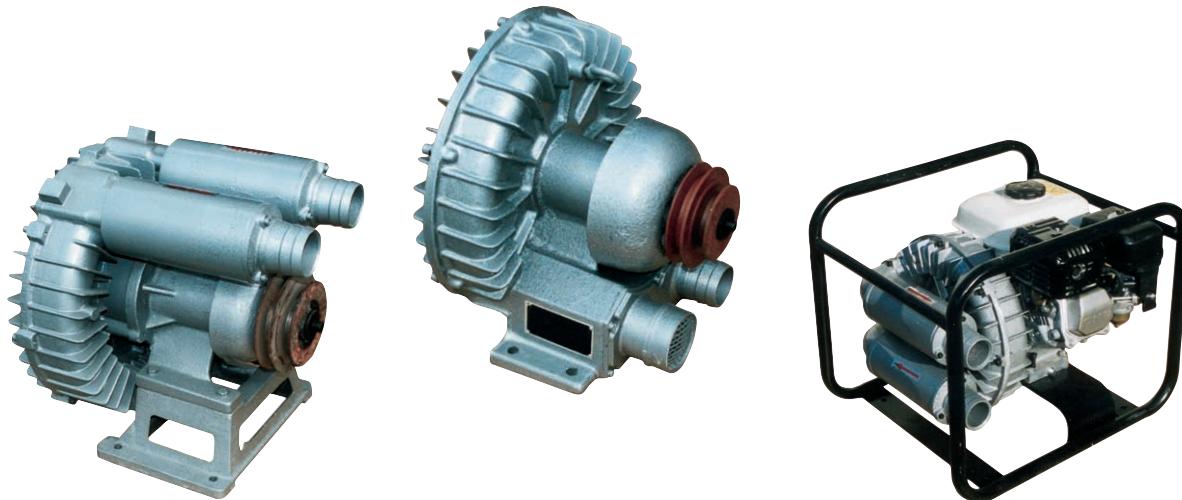

1. Use a ring compressor with built in electric motor and power it off an independent generator.
2. Use a ring compressor SD and power it with an external combustion engine that you already own.
3. Use one of the ring compressors in our catalogue which come as complete units with added petrol engines and in different capacities.
4. For the transport of live fish, use one of the ring compressors SD and power it with the auxiliary drive of the truck if there is one.

Distributor Cross an invaluable asset

Normal air emission 6 – 8000 l/h

The finely pored ceramic diffusers introduce the air in extremely fine bubbles. The float on top screens the gush of air from below and keeps the whole unit in a slow pendular motion, thus ensuring optimal distribution.

Hose connection Ø 20 mm.

All parts are made of corrosion-proof plastics and stainless steel.

33290	3	25

Spiral Hose

Use

As principal or secondary pipe for aeration plants, T-connectors can be inserted as outlets where desired. The sturdiness of the hose makes it suitable for aboveground and underground installation. It is popular as suction and pressure hose for water pumps and similar uses. Smooth inside wall.

Solid block element - no energy requirement but great result

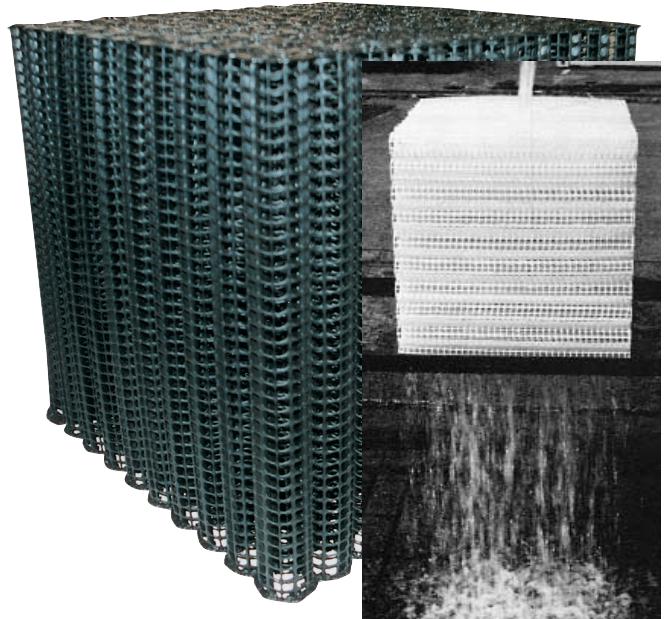

Use:

Simply let water run through the filter material. Be it block element or bulk material in a tube, closed off with a perforated metal sheet or wire mesh, the degassing and aeration result is always unsurpassed.

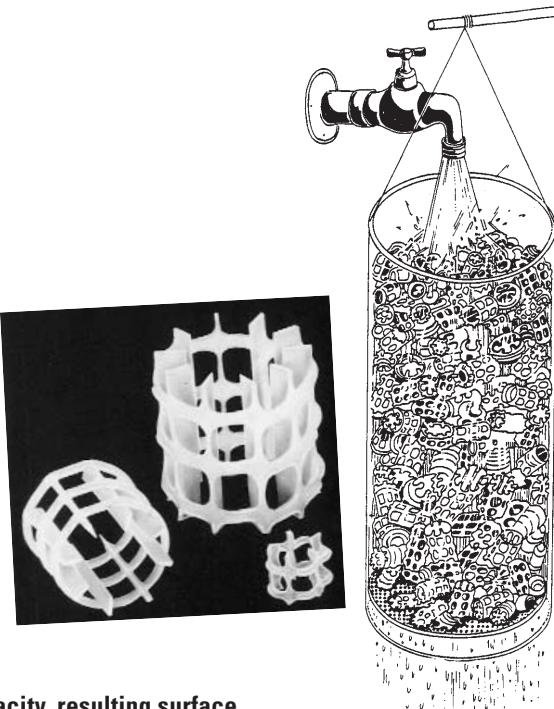

- stable block elements made of highly durable polyethylene
- material PE black and white
- little pressure loss
- high water flow-through

- high water flow-through
- good water distribution
- chemical resistant
- highly break-proof

Diaphragm Compressors for transporting live fish

Diaphragm Compressors

Order No. 351/12

Order No. 351/24

Order No. 351/13 replacement diaphragm

Technical Specifications:

Diaphragm Compressor

Motor power: 46 W, 12/24 V

Current: 5 A

Capacity: 1300 l/h

Max pressure: 1.5 bar

Weight: 5 Kg

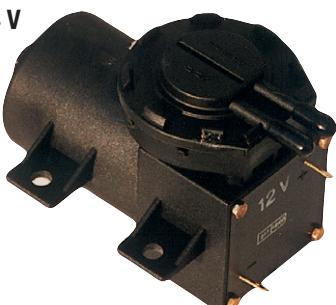

Max. dimensions: 00 x 90 x 220 mm

Suitable for containers with a net volume of 500 – 1000 l

Diaphragm Pump

Order No. 168/12 V

Order No. 168/24 V

Single diaphragm pump for the creation of pressure or vacuum. Powered by built-in permanent direct current motor. Pump- and motor-casing made of fibreglass-reinforced Polyamide. Suitable for tanks of approx. 150l of water.

Technical Specifications:

Order No. 168/12 V 168/24 V

Motorpower: 10 W 10 W

Current: 0,8 0,4

Diaphragm Pump M2K3 for fish keeping, small ponds and fish tanks

Order No. 1060

Especially suitable for the aeration of fish tanks, aquariums, and keeping tanks in restaurants and shops. The pump delivers fully oil-free air and works very quietly. The power cable is disconnected and supplied with a plug. A complete suite of distributors is included. It is comprised of: 2 diffuser stones, 1 T-connector, 3 m of hose.

A complete suite of distributors is included. It is comprised of: 2 diffuser stones, 1 T-connector, 3 m of hose

Voltage: 220
Capacity: 300
Power: 5
Dimensions: 60 x 75 x 160

Diaphragm Pump Air King for fish keeping, small ponds and fish tanks

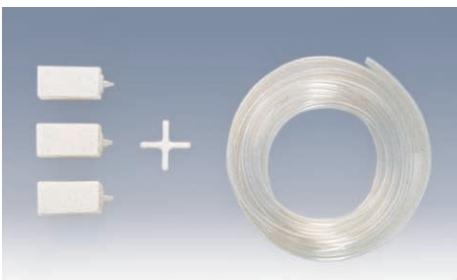

Order No. 1061

For Aeration of larger keeping tanks. Design as above. A complete suite of distributors is included. It is comprised of: 3 diffuser stones 1 cross - connector 4 m of hose

Voltage: 220
Capacity: 600
Power: 8
Dimensions: 165 x 160 x 80

Replacement Parts:

- Order No. 1061/01 replacement diaphragm
- Order No. 1061/02 diaphragm body
- Order No. 1061/03 magnetic coil
- Order No. 1061/04 hose, red, 7 cm

Diaphragm Pump for fish keeping, small ponds and fish tanks

Order No. C302K

Order No. C302K-M diaphragm replacement set

The quietness and the capacity of this pump have already convinced many owners. They successfully use it for aeration purposes in restaurants and trade. It is especially suitable for fish keeping and breeding. Several independently switchable connectors can be attached.

Setting	Capacity l/h	Power consumption W
1	2400	30
2	3000	38
3	3600	50

The air volume can be adjusted by means of a knob with three steps.

A very sturdy plastic casing protects the interior from moisture.

Four rubber legs prevent the transmission of vibrations.

Accessories:

- Order No. 1930 dual air tap
- Order No. 1931 triple air tap
- Order No. 1932 quadruple air tap

Replacement Parts:

- Order No. C302K-1 3 level switch
- Order No. C302 K-4 Rubber diaphragm with thread hose connector piece
- Order No. 158
