Pathport³ is a stainless steel (18 gauge) constructed transport and storage system, specifically manufactured to accommodate pathology specimens. Equipped with a custom fit, disposable formaldehyde-neutralizing pad, the Pathport³ is specially designed to absorb harmful spills and vapors. Spill clean-up can be accomplished by simply replacing the pad. (Replacement pads are available - BE021)

Formalin and other pathology fixatives are classified as regulated waste. O.S.H.A.'s Bloodborne Standard 29 CFR Part 1910.1030 mandates that pathology specimens be placed in secondary containers which are:

- **Constructed to contain all contents and prevent leakage of fluids during handling, storage, transport or shipping**
- **Labeled**
- **Closes prior to removal to prevent spillage of contents during handling, storage, transport and shipping**

The Pathport³ Is:

Convenient: Offers the combined convenience of secure specimen storage and transportation anywhere.

Safe: Pathport³ allows the transport and storage of pathology specimens in full compliance with O.S.H.A. bloodborne and hazard communication standards.

Secure: Pathport³ offers a secure alternative to store any pathology specimen.

Effective: Pathport³ disposable pads effectively absorb and neutralize harmful formalin spills within the Pathport³ Transport System.

Economical: Pathport eliminates costly annual exposure monitoring and hazard communication training for transport personnel and laboratory staff.

Pathport³ Specifications

Dimensions: 43"H x 18"W x 36" L
(108cm H x 45cm W x 92cmL)

For full O.S.H.A. compliance, order the Pathport Transport System, exclusively from Mopec.

Pathport³
Product No. BE020

Disposable Replacement Pads
(1 per package)

36" L x 18" W x 1/4" Thick
(90 cm x 45 cm x .7 cm)

Product No. BE021
