Triple-Pass Heat Torch™

The Triple-Pass Heat Torch features a triple-pass construction that minimizes skin temperatures on the heater. The high-efficiency design focuses heat where it's needed, protecting people and product from unnecessarily hot surfaces.

The triple-pass design offers superior performance in heat cycling applications due to its high internal thermal storage capacity. Out temperature quickly stabilizes when power is applied and regulation is easily maintained.

The Triple-Pass Heat Torch is a 1.0" diameter heater which can provide up to 500 watts and handle up to 7.5 SCFM of air. Outlet temperatures up to 1200° F can be supplied for your heating requirements.

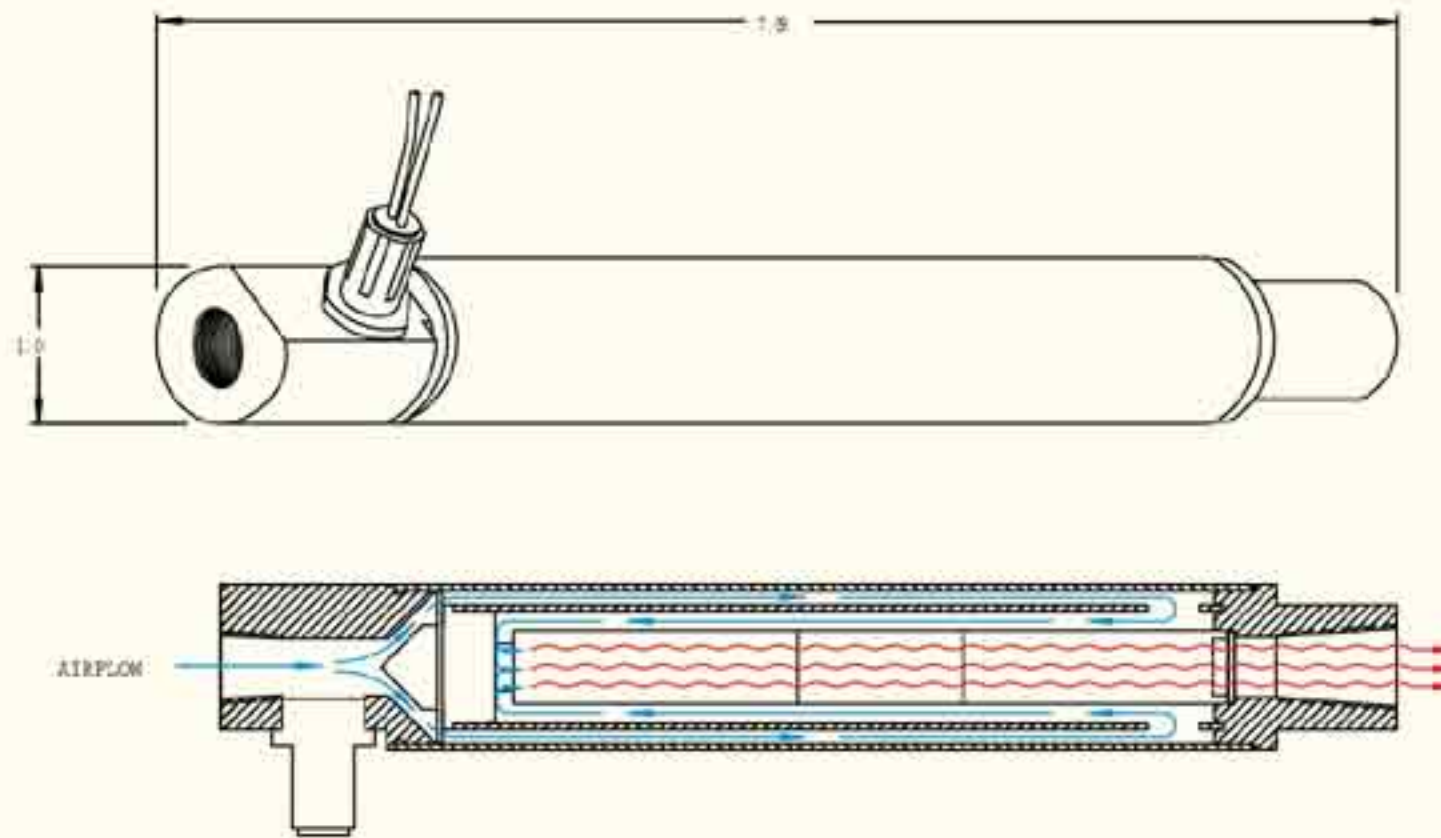

Wattage:
50-500

Voltage:
120
240
480

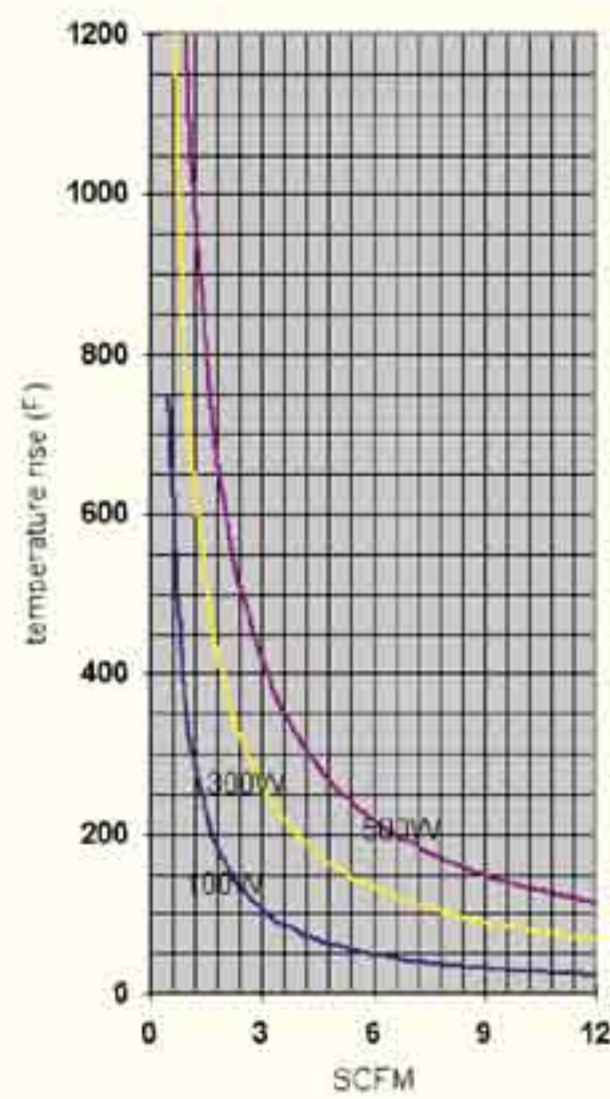

Inlet Fitting:
1/8" NPT female

Exhaust Fitting:
1/4" NPT female

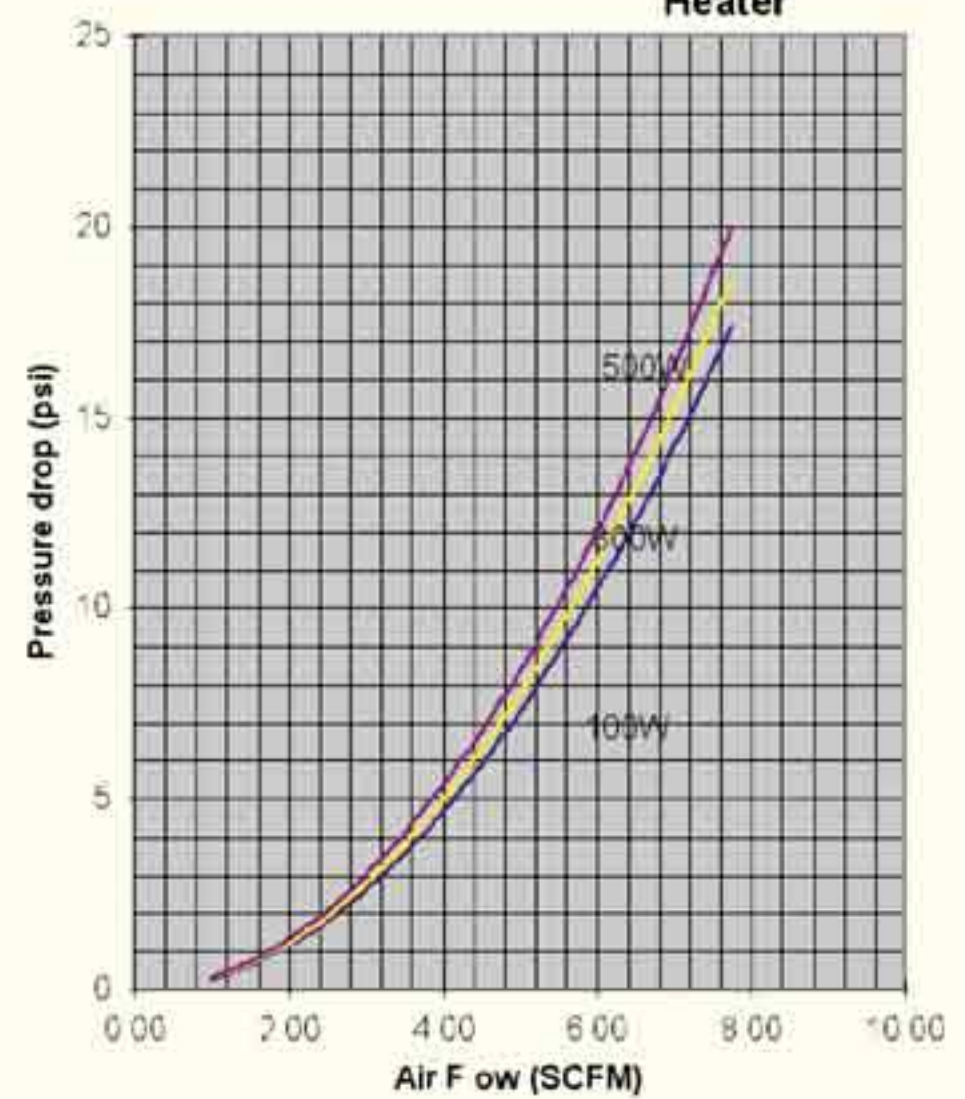

Termination:
PIN - 3 pin plug (20 psi)
LW - Leadwires (110 psi)
