

**The Lead Time for Residential Orders is 3-4 Business Days.**

HeatTrak's Residential Heated Snow Melting Mats will prevent snow and ice accumulation on walkways and stairs around your home. Made of customized thermoplastic materials, the mats are portable and can be left outside for the entire winter season. The HeatTrak mats will generate heat to melt snow at a rate of 2" per hour leaving your pathway to the home clean and clear 24/7. The Residential Heated Walkway Mat and Heated Stair Mat can be used independently or interconnected with one another to create a continuous system of snow melting mats. With the mats' built in watertight connector cables, you can Mix and Match walkway and stair mats to create your perfect snow melting solution - all on a single plug!

Each Heated Walkway Mat and Heated Stair Mat comes with its own built in watertight connector cables. A customer can use the watertight connector cables to connect the mats to other residential mats or to a control unit. Every group of Residential Heated Mats requires a GFCI (Ground Fault Circuit Interrupter) control unit to connect the system to an electrical outlet. A customer can connect up to 5 walkway mats, 15 stair mats or a combination thereof (up to 15 amps) on a single control unit.

Residential Heated Stair Mat

Residential Heated Walkway Mat

GFCI Control Unit

Watertight Cable Extender - 20 Inch

Watertight Cable Extender - 25 Feet

## Residential Heated Stair Mat

**Residential Heated Stair Mat:** This single mat measures 10" x 30" and is designed to be used on outdoor stairs. You can connect up to 15 Stair Mats on a single Control Unit or connect Stair Mats to Walkway Mats. For example, connect 3 Stair Mats to 4 Walkway Mats to create a clear passageway from your back door to the car.

**Size:** 10" x 30"

**Watts (per tread):** 80

**Amps:** 0.7

**Surface material:** Customized Thermoplastic

**Color:** Black

**Watertight Connector Cable Length:** 18"

## Residential Heated Walkway Mat

**Residential Heated Walkway Mat:** This single mat measures 20" x 60" and is designed to either stand alone or connect with other walkway or stair mats using its own watertight connectors. For example, a total of 5 walkway mats can be connected on a single plug to cover a 25 foot walkway.

**Size:** 20" x 60"

**Watts:** 300

**Amps:** 2.5

**Surface Material:** Customized Thermoplastic

**Color:** Black

**Watertight Connector Cable Length:** 4"

### GFCI Control Unit

**GFCI Control Unit:** Every group of Residential Heated Stair Mats and Walkway Mats requires a GFCI (Ground Fault Circuit Interrupter) control unit to connect the system to an electrical outlet. The control unit contains a watertight connector that will allow it to connect to the first or last stair mat in your system. The control unit is rainproof, so it can be left outside for the entire winter season.

**Control Unit Cord Length:** 6 feet

**Note:** If you do not buy a GFCI Control Unit, your mats will not work. Additionally, if you are ordering Heated Mats for more than one location (ie - front of the house and back of the house) you must order a control unit for each location.

## Watertight Cable Extender - 20 Inch

20-Inch Watertight Cable Extender can be used with Residential Walkway Mats (HR20-60), Residential Stair Mats (HR10-30), and Industrial Stair Mats ("HRT" Series). The cable extender is not compatible with Industrial Walkway Mats. Multiple cable extenders can be connected together to create custom length cables. The 20-Inch Cable Extender and 25-Foot Cable Extender can also be connected together.

### **For Residential Walkway & Stair Mats:**

When you Mix and Match the Residential Walkway and Stair Mats, there are two situations which may require you to use a 20-inch cable extender:

1. Walkway Mats connecting on two different levels (i.e. - a tiered walkway). In this case you will need a 20-inch cable extender to allow the mats' cables to reach one another.
2. A 'Stair Mat - Walkway Mat - Stair Mat' combination. When you connect a Stair Mat to a Walkway Mat and then to another Stair Mat, you will need a 20-inch cable extender to connect the 1st Stair Mat (closest to the outlet) to the Walkway Mat in the middle.

**Length of Cable Extender:** 20 Inches

**Cable Gauge:** 14/3 SJTW

## Watertight Cable Extender - 25 Feet

**25-Foot Watertight Cable Extender** can be used with Residential Walkway Mats (HR20-60), Residential Stair Mats (HR10-30), and Industrial Stair Mats ("HRT" Series). **The cable extension is not compatible with Industrial Walkway Mats.** Multiple cable extenders can be connected together to create custom length cables. The 25-Foot Cable Extender and 20-Inch Cable Extender can also be connected together.

If the electrical outlet on your house or facility is further than 6' from the heated mats you will need to use an outdoor rated cable extender. This 25-Foot Watertight Cable Extender will provide an additional level of protection against water and moisture than other outdoor rated extension cords. This watertight cable extender was designed with the HeatTrak Walkway and Stair Mats in mind and will only work with HeatTrak products. To ensure a watertight seal, the cable extender has the same patented connectors as the heated walkway and stair mats. This cable extender can be used with Residential Walkway Mats (HR20-60), Residential Stair Mats (HR10-30), and Industrial Stair Mats ("HRT" Series).

**Length of extension cable:** 25'

**Cable Gauge:** 14/3 SJTW
