

Overview Sun simulation

UV curing units for simulation of natural sunlight.
Used for material ageing and testing.

UV Cube 400 SOL

- Closed tabletop unit, especially appropriate for laboratory use
- Homogeneous irradiation
- Useful irradiation area approx. 300 mm x 400 mm
- High operational safety, the door is locked when the shutter is open and the shutter is locked when the door is open

SOL 500, SOL 1200, SOL 2000

- Universally combinable lamp modules with different electric outputs
- Can be integrated into climatic chambers
- Lamp spectrum corresponds to natural sunlight
- Radiation intensities depend upon distance from the lamp
- Ozone-free lamps with long service-life
- Easy lamp exchange

Optional:

- SOL 1200 and SOL 2000 can be used with electronic power supply

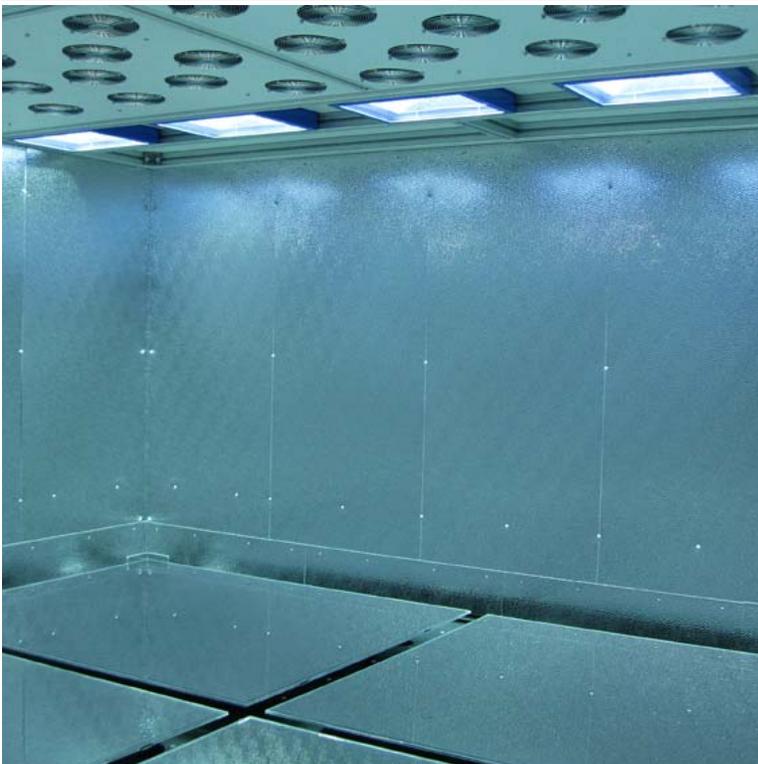

Applications for the photovoltaics industry

- Flexible system solutions for the photovoltaics industry to control quality
