5300 SERIES FUNCTIONAL FEATURES

A highly comfortable individual armchair of generous dimensions designed for use in top class VIP lounges, cinemas, ferries, cruise liners and home theatre rooms.

The chair is fully upholstered in natural leather. The backrest has a double curve giving support to the lumbar region and a headrest cushion, ensuring the user enjoys a high degree of comfort. Between the upholstery and the foam of both the seat and the back, there is a 5-mm thick TS System fire curtain that keeps fire from reaching the foam, thus preventing the emission of toxic gases and flames.

The user can tilt the back 12° from its original position by means of a completely silent, smoothly operating electrical motor. Within this range, the user can lean back while maintaining optimum visibility.

The seat has a skirt at the front that acts as a leg rest. The height of the leg rest can be adjusted to suit the user by means of a silent, smoothly operating electrical motor.

The movements of the seat and backrest are controlled by electronic pushbuttons located on the inside of the left armrest. They are easily accessible by the user and are provided with extremely simple operating instructions.

The armchair is fitted with a system that automatically returns the backrest and leg rest to their original positions whenever the chair is vacated. This ensures that the hall or room is kept looking neat and tidy and, if the chairs are arranged in rows, there is always plenty of room to move freely between them.

The chair's electrical installation complies with the relevant standards currently in force.

The feet are height-adjustable to compensate for any unevenness in the floor and keep the chair in a perfectly stable position at all times.

This armchair can also be anchored to the floor.

Optionally, a 250 x 600-mm side table finished in select wood with a glass-holder can be fitted between two chairs.

TECNICAL CHARACTERISTICS

STRUCTURE:

Steel plate and tube, welded with continuous arc.

POLYURETHANE FOAM:

Seat density: 65 Kg. m³

Back density: 57 Kg. m³

PAINT:

Electrostatic powder epoxy

Coating thickness: 70-80 micra

Grid adherence: 100%
