

# CPX-Terminal

## Installation with CPX-CP interface

**The modular concept of the CPX electrical terminal is moving forwards the world of compact performance.** Thanks to the CPX-CP interface, all system components included in the CP installation system are now instantly available on a single system platform – type CPV10/14/18 compact valve terminals, type CPA10/14 modular valve terminals and CP input and output modules. Depending upon the utilised fieldbus protocol, it's even possible to operate several CP interface modules.

### **The advantages of compact performance**

#### **Reduced wiring expenses**

The CPX-CP interface is part of a complete installation system for mounting directly to the machine with IP 65/IP67 protection – pneumatics and electronics from a single source. CPX-CP interface for simple connection of CPV/CPA valve terminals to the CPX electrical terminal.

### **Combination – decentralised plus centralised**

Easy mixing of centralised and decentralised installations for an optimised, clear-cut system structure – can be easily adapted to the system.

### **Scope of CPX-compatible diagnosis functions**

Extensive diagnosis functions from the CPX-environment reduce system downtime.

From centralised ...

... with easy connection ...

... to decentralised

# CPX-Terminal

## Installation with CPX-CP interface

### Technical Data

| Designation                     | CPX-CP-4-FB  |
|---------------------------------|--|
| Protection                      | IP65/IP67  |
| No. of CP strings               | 4  |
| String length                   | Max. 10 m  |
| Number of CP modules per string | 1 input module + 1 valve terminal or 1 output module in combination with CL CP-I/O modules:<br>4 CL modules, mixed as desired  |
| CP system cycle time            | 4 ms (CL CP-I/O modules only: 2 ms)  |
| Power supply                    | Via CPX interlinking block   |
| Power supply to CP modules      | 24 V DC, max. 1.8 A, short-circuit proof, overload proof (electronic fuse)   |
| Configuration check             | Automatic after powering up (comparison of current and stored configuration)   |
| Display components              | 4 LEDs for indicating CP string errors<br>2 LEDs for indicating supply power (sensors, actuators)<br>2 LEDs for indicating errors and operating state                        |
| Control elements                | Save key for saving the current CP configuration   |
| System expansion                | CPX modules and CP interface can be mixed as desired<br>several CP interfaces can be used (observe system limits)<br>CP addressing module and bus terminator are unnecessary |
