

UV lamps

In order to become a full-service provider that can offer to its customers the advantage of individually adapted production solutions, we have expanded the Höhle group by founding our subsidiary Aladin GmbH in 1999.

UV lamps

Aladin GmbH develops and produces UV lamps - the heart of UV equipment. Aladin manufactures individually adapted UV lamps with the optimum spectrum for the curing of different inks, coatings, adhesives and pottings.

Thanks to highly qualified staff and state-of-the-art production processes, Aladin GmbH achieves a maximum lamp quality in view of performance and service life.

Due to this expansion, the Höhle group has still increased its contribution to the efficiency and quality improvement of our customers' production processes.
