

# ENTSCHÄUMER

*Anti-foaming agent for use in dirty-water tanks*

**Ingredients:**

ENTSCHÄUMER contains: less than 5% non-ionic surfactants. Contains preservative. Other ingredients: silicone fluid, silicic acid.  
pH-value: approx. 6.

**Performance:**

Prevents the formation of foam in the dirty-water tank of extraction equipment, wet vacuums and cleaning machines or destroys foam from surfactant and soap residues there. Mixing with water makes it to cream which increases its efficacy. Used sparingly (can be highly diluted).

**Application notes:**

Suitable for all dirty-water containers in spray extraction equipment, wet vacuums and cleaning machines as well as for injectors that are connected to the dirty-water tanks.

**Usage:**

Shake well before use (also applies to a highly diluted solution for use). Add ENTSCHÄUMER at a 0.1% concentration to injectors or in concentrated form to the suction tube or the dirty-water tank (a few squirts).

**Precautions for use:**

ENTSCHÄUMER must not fall onto the surface being cleaned (flooring, carpet, etc.) or be added to the cleaning solution. If ENTSCHÄUMER is accidentally spilled on floorings or textiles, these contact points must be cleaned with benzene-based cleaners (CLEANER R, STAIN-EX).

**Ecology:**

This product is subject to regulations governing the environmental compatibility of washing and cleaning agents and the associated regulations on the biological degradability of the raw materials used.

Comprehensive information about the environmental characteristics of this product is available on request.

Give only completely packaging to special waste disposer.

This product is designated for industrial use.
