

Електролукс Electrolux Bitola

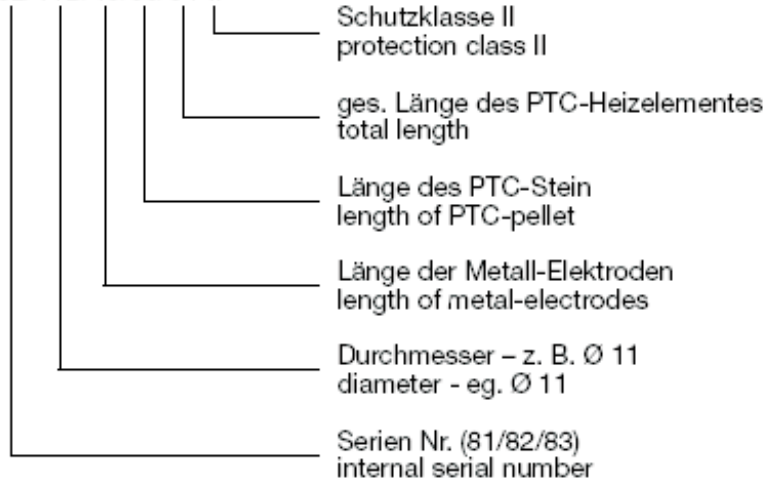

PROCESTI PLEHENI ELEKTRICNI GREJACI

Typenübersicht - bitte hier klicken!

List of types - please click here! www.electrolux.com.mk

Typen-Codierung für die Tabellen der Seiten 72 und 73.
Coding of types for the tables on page 72 and 73.

Beispiel: 82/11B/40/35/54-II
Example:

Der Zusatz B im Anschluß an den Durchmesser ist ein weiterer Hinweis auf die Schutzklasse. B = Schutzklasse II.

Hauptsächlich in der Bemusterungsphase wird die Code-Nr. des verwendeten Kaltleiters am Ende der Typenbezeichnung aufgeführt.

Beispiel: 82/11B/40/35/54-II (84563) oder LN (89/82)

Bei Rückfragen, Bestellungen etc. muß die gesamte Typenbezeichnung angegeben werden.

The letter B behind the diameter indicates a heating element of protection class II.

Mainly during the prototype, sample or pre-production phase, the pellet-code no. is also indicated.

Example: 82/11B/40/35/54-II (84563)
or: 82/11B/40/35/54-II LN (89/82)

Please mention full code of types in your order or your request for samples.

We should be pleased to assist you in this respect.

Electroluks is registered trademark of Elektroluks companies in Macedonia and other countries

Електролуks Electrolux Bitola

Ovoј crtez e сопственост на Electrolux-Bitola. Bez negovo писмено одобрување истој несме да се препишува, умножува нити копира без согласност од Electroluks во спротивно се сносат последици во смисла на членовите 163 и 164 од Кривичниот законик Р.М. (повреда на авторско право)

1. Erforderliche Anheizleistung P₁ in (KW)

$$P_1 = \frac{Q \cdot X_1}{t_1}$$

$$Q = Q_1 + Q_2 + Q_3 + Q_4$$

$$Q_1(2) = m \cdot c \cdot \Delta T$$

$$Q_3 = H_f \cdot m$$

$$Q_4 = H_r \cdot m$$

Anmerkung:

Werden mehrere Aggregatzustände durchlaufen, so ist Q₁ für alle Aggregatzustände zu berechnen und dann zu addieren (siehe Berechnungsbeispiel 2)

2. Erforderliche Dauerheizleistung P₂ in (KW)

a) Ohne Entnahme des beheizten Stoffes

$$P_2 = \frac{Q \cdot X_2}{t_1}$$

b) Bei teilweiser Entnahme des beheizten Stoffes und gleichzeitigem Nachschub

$$P_2 = \frac{Q \cdot X_2 + Q_5}{t_2}$$

$$Q_5 = m \cdot c \cdot \Delta T$$

1. Energy P₁ in (KW) required for heating-up

$$P_1 = \frac{Q \cdot X_1}{t_1}$$

$$Q = Q_1 + Q_2 + Q_3 + Q_4$$

$$Q_1(2) = m \cdot c \cdot \Delta T$$

$$Q_3 = H_f \cdot m$$

$$Q_4 = H_r \cdot m$$

Note:

If several states of aggregation are passed through, then Q₁ has to be calculated for all these states of aggregation and subsequently to be added. (cf. example 2)

2. Energy P₂ in (KW) required for continuous heating

a) Without removal of the heated material

$$P_2 = \frac{Q \cdot X_2}{t_1}$$

b) With part removal of the heated material and simultaneous replacement

$$P_2 = \frac{Q \cdot X_2 + Q_5}{t_2}$$

$$Q_5 = m \cdot c \cdot \Delta T$$

| Formel kurzzeichen | Dimension | |
|--------------------|-----------------------|-------------------------------------------------------------------------------------------|
| Q ₁ | (kJ) | Wärmemenge zur Temperaturerhöhung des zu beheizenden Stoffes (s. auch Anm.) |
| Q ₂ | (kJ) | Wärmemenge zur Temperaturerhöhung des Behälters, der Werkzeuge oder dergl. |
| Q ₃ | (kJ) | Wärmemenge zur Durchführung des Schmelzvorgangs |
| Q ₄ | (kJ) | Wärmemenge zur Durchführung des Verdampfungsvorgangs |
| Q ₅ | (kJ) | Wärmemenge zur Temperaturerhöhung des nachfließenden (=entnommenen) Stoffes |
| t ₁ | (s) | Anheizzeit |
| t ₂ | (s) | Zeit, in der die bei der Berechnung von Q ₅ eingesetzten Masse zu erwärmen ist |
| X ₁ | | Multiplikationsfaktor für Wärmeverluste siehe nachstehende Tabelle |
| X ₂ | | Multiplikationsfaktor für Wärmeverluste siehe nachstehende Tabelle |
| P | (KW) | elektrische Leistung |
| m | (kg) | zu beheizenden Masse |
| c | ($\frac{kJ}{kg K}$) | spezifische Wärmekapazität siehe Tabelle Seite 56 und 57 |
| ΔT | (K) | Temperaturdifferenz zwischen Anfangs- und Endtemperatur |
| H _f | ($\frac{kJ}{kg K}$) | spez. Schmelzwärme, siehe Tabelle Seite 56 und 57 |
| H _r | ($\frac{kJ}{kg K}$) | spez. Verdampfungswärme, siehe Seite 56 und 57 |

Multiplikationsfaktoren für Wärmeverluste

| Wärmeverlust % | 0 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 |

Das Ohmsche Gesetz

Ohm's Law

| | | |
|-------------|------------|-----------------------------------------------------------|
| Spannung | Voltage | (V): $U = I \cdot R = \frac{P}{I} = \sqrt{P \cdot R}$ |
| Stromstärke | Current | (A): $I = \frac{U}{R} = \frac{P}{U} = \sqrt{\frac{P}{R}}$ |
| Widerstand | Resistance | (Ω): $R = \frac{U}{I} = \frac{P}{I^2} = \frac{U^2}{P}$ |
| Leistung | Output | (W): $P = U \cdot I = I^2 \cdot R = \frac{U^2}{R}$ |

U = Spannung in Volt
I = Stromstärke in Ampere
R = Widerstand in Ohm
P = Leistung in Watt

U = Voltage in Volts
I = Current in Amperes
R = Resistance in Ohms
P = Output in Watts

Електролукс Electrolux Bitola

Ovoј crtez e сопственост на Electrolux-Bitola. Bez negovo писмено одобрување истиот несмее да се препишува, умножува ниш копира без согласност од Електролукс во спровитно се снасат последици во смисланиа членовите 163 и 164 од кривичниот закон R.M. (повреда на авторско право)

Auslegung des Heizkörpers

Ist eine Regelung vorgesehen, so ist bei der Dauerheizleistung P₂ eine Leistungserhöhung von ca. 30 bis 50% empfehlenswert.

Der so errechnete, größte Wert von P₁, oder P₂ ist für die erforderliche Leistung einzusetzen. Es ist jedoch darauf zu achten, daß die maximale Oberflächenbelastung des Heizkörpers nicht überschritten wird.

Output rating of heating elements

If control is intended, we recommend an increase of approximately 30 to 50% for the continuous heating output P₂.

The maximum value of P₁ or P₂ thus calculated is to be used for rating the element. Care should be taken not to exceed the maximum surface loading of the heating element.

Berechnungsbispiele

- 20 Liter Wasser innerhalb 60 min (3600 s) von 18°C auf 80°C erwärmen • Wärmeverlust 30% • mit Regelung auf Temperatur halten • (50% Leistungserhöhung, da Regelung)

$$Q = Q_1 = m \cdot c \cdot \Delta T \\ = 20 \cdot 4,186 \cdot 62 \\ = 5190,64 \text{ kJ}$$

$$P_1 = \frac{Q \cdot X_1}{t_1} = \frac{5190,64 \cdot 1,43}{3600} = 2,061 \text{ KW}$$

$$P_2 = \frac{Q \cdot X_2}{t} = \frac{5190,64 \cdot 0,43}{3600} = 0,62 \text{ KW}$$

$$P_2 + \text{Leistungserhöhung} \quad 50\% = (0,62 \cdot 1,5) = 0,93 \text{ KW}$$

Examples of calculations

- 20 litres of water are to be heated from 18°C to 80°C within 60 minutes (3600 s) • heat losses 30% • temperature kept up by a control device • (50% increase in rated output because of control)

$$Q_E = m \cdot c \cdot \Delta T \\ = 10 \cdot 2,42 \cdot 20 = 484 \text{ kJ}$$

$$Q_W = m \cdot c \cdot \Delta T \\ = 10 \cdot 4,186 \cdot 100 = 4186 \text{ kJ}$$

$$Q_1 = Q_E + Q_W = 4670 \text{ kJ}$$

$$Q_2 = 0 \quad (\text{Behälter vernachlässigt}) \\ (\text{Container neglected})$$

$$Q_3 = H_q \cdot m = 334,9 \cdot 10 = 3349 \text{ kJ}$$

$$Q_4 = H_r \cdot m = 2258 \cdot 10 = 22580 \text{ kJ}$$

$$Q : Q_1 + Q_2 + Q_3 + Q_4 = 30579 \text{ kJ}$$

$$P_1 = \frac{Q \cdot X_1}{t_1} = \frac{30579 \cdot 1,18}{90 \cdot 60} = 6,682 \text{ KW}$$

E = Eis, ice

W = Wasser, water

- Stündlich sollen 200 m³ Luft von 18°C auf 120°C erwärmt werden • Wärmeverlust 20%

$$Q_1 = m \cdot c \cdot \Delta T \quad m = \frac{200 \text{ m}^3 \cdot 1,2928 \text{ kg}}{\text{m}^3} = 258,56 \text{ kg} \\ = 258,6 \cdot 1,00 \cdot 102 \\ = 26377,2 \text{ kJ}$$

- 200 m³ of air are to be heated hourly from 18°C to 120°C • heat losses 20% • (1m³ = 1cubic metre at 0°C and 1 bar)

$$Q_2 = 0 \quad (\text{Behälter vernachlässigt}) \\ (\text{Container neglected})$$

$$Q_3 = 0$$

$$Q_4 = 0$$

$$Q = Q_1 = 26377,2 \text{ kJ}$$

$$P_1 = \frac{26377,2 \cdot 1,25}{60 \cdot 60} = 9,158 \text{ KW}$$
