

Cutlery

Materials

Single-use cutlery for the foodservice industry is produced with two principal types of plastic.

Polystyrene

At the top end of the category, polystyrene is more rigid and tends to be used in high performance situations, such as upscale take-out or adult casual dining where “knife-and-fork” entrees are served.

Polypropylene

Typically offered in smaller sizes, polypropylene is economical, lighter in weight and somewhat flexible. This unique material bends, and resists breaking. It’s great for quick service applications and anytime you’re serving food to children.

Weight

Cutlery in both plastics is available in a variety of weights to match any application.

Medium Weight

A solid choice for most everyday entrees, and popular for grab-n-go and takeout, consider it your multi-purpose weight. Medium weight cutlery is a good combination of value and functionality.

Heavy Weight

Also appropriate for high-end applications, heavy weight cutlery pieces provide performance you can count on.

Extra Heavy Weight

Extremely durable and capable of handling dense foods, extra heavy weight plastic is your best alternative to reusable flatware. With a rigid, solid feel in your hand, expect premium performance for high-end applications.
